ExoticCare User Manual

1. Introduction

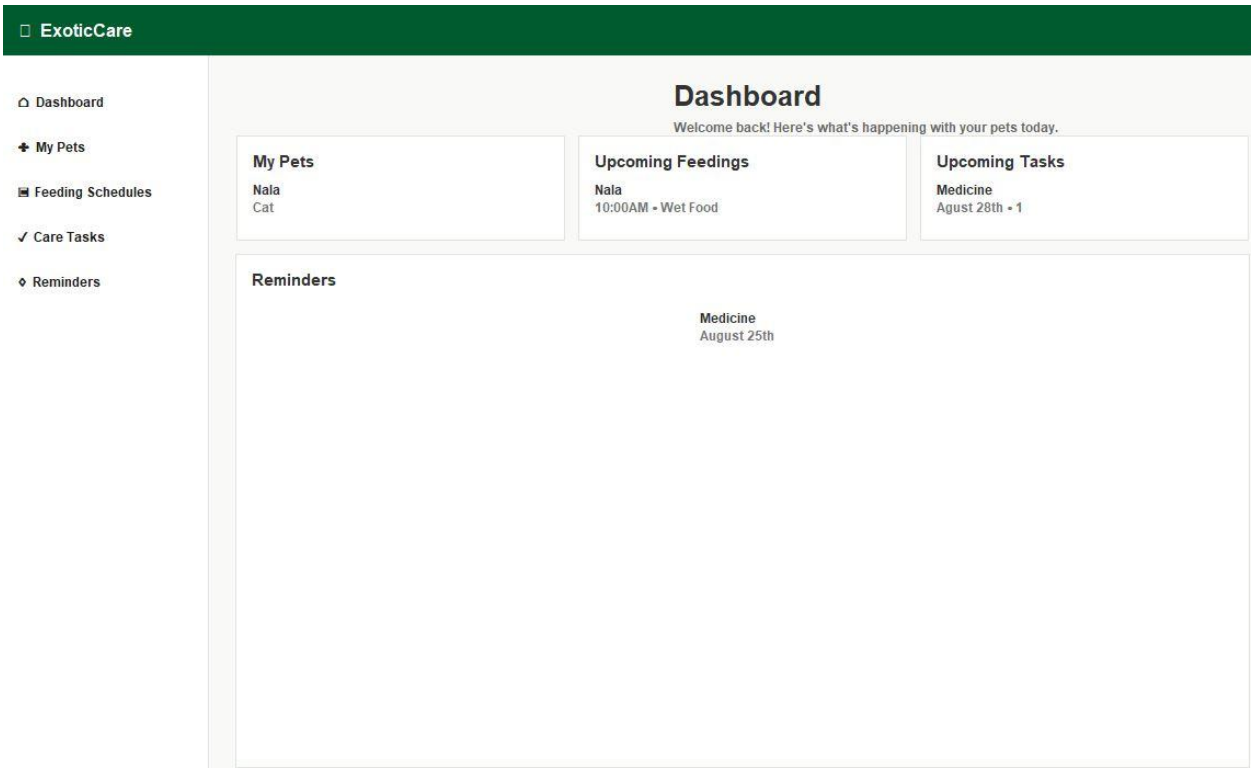

Welcome to ExoticCare, this application is a Java application where it's meant to help users store information and setting reminders to help them keep track of their exotic pet routines. The application will allow users to manage their pet profiles, feeding schedules, care tasks, and any reminders that they might need help with.

2. Starting ExoticCare

When starting up ExoticCare the users will be opened to an empty dashboard that has boxes of where their future information for their pets will be.

3. Dashboard

The main dashboard is where users will see where their information will be shown after they've typed and put it in. They can also see the navigation tabs on the left of the screen to have easy access to all the other tabs and features that ExoticCare has to offer.

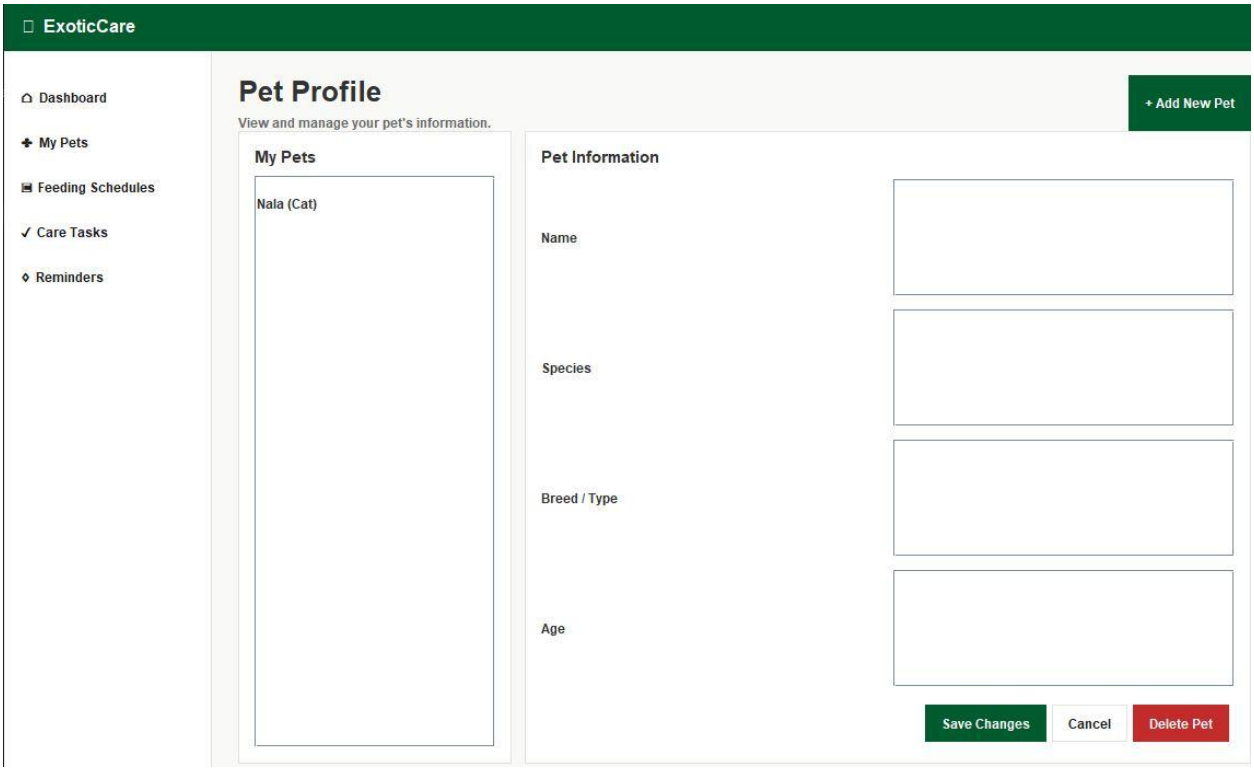

4. My Pets

Select My Pets from the navigation menu to manage pet profiles.

Users can:

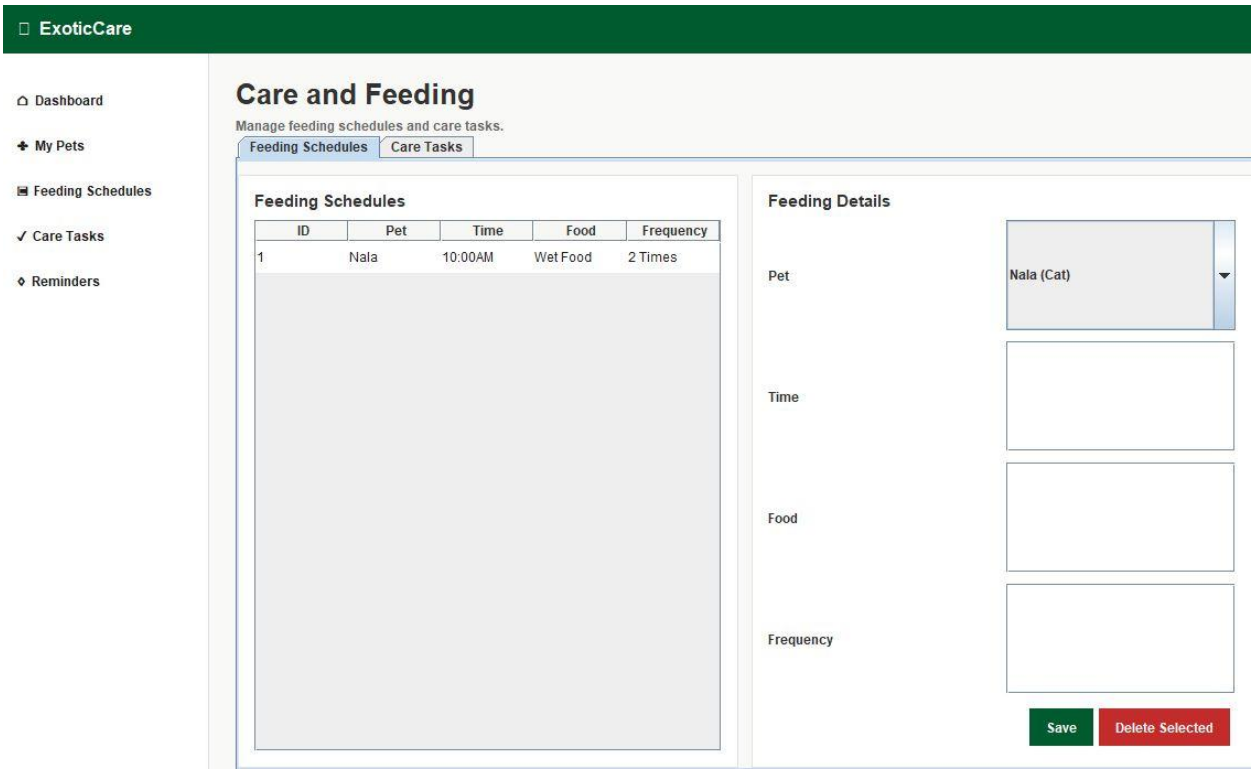

- Add a new pet
- Enter the pet's name, species, breed/type, and age
- Update existing pet information
- Delete a pet profile

Select Save Changes after entering or changing pet information.

5. Feeding Schedules

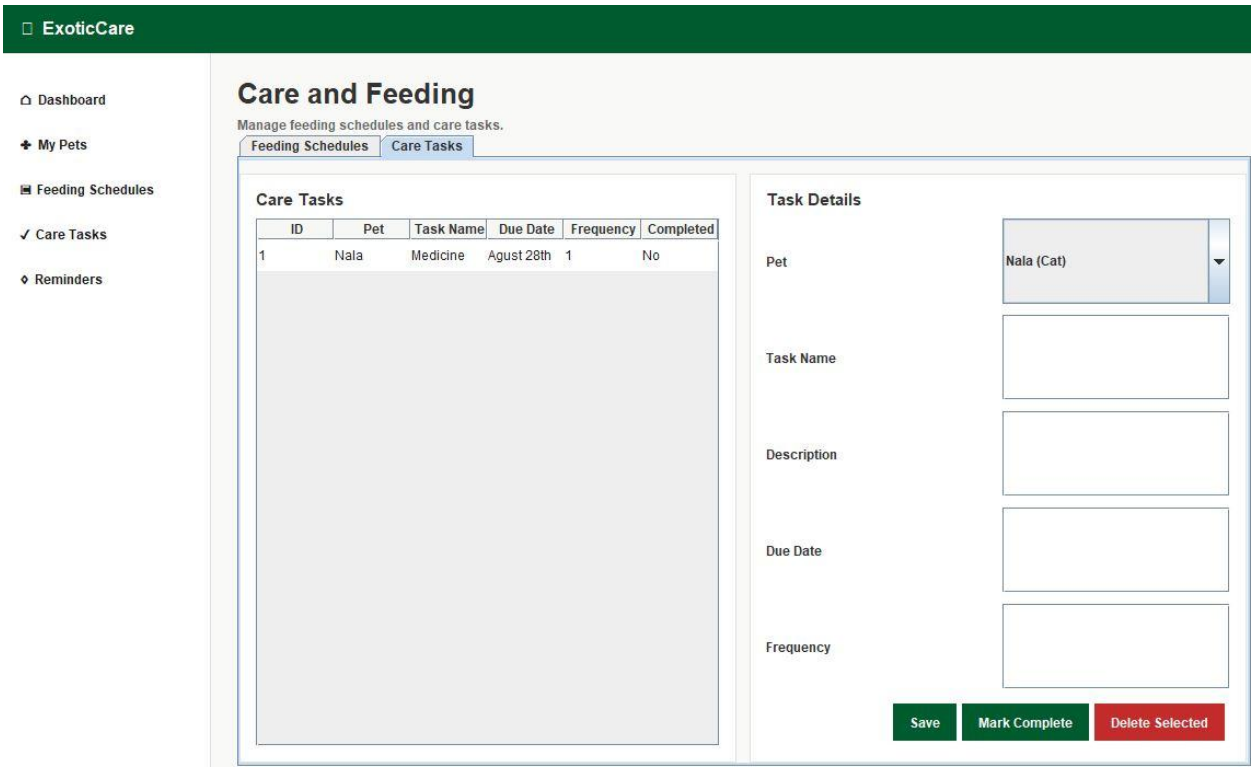

Select Feeding Schedules to manage feeding information for a pet. Choose the pet and enter the feeding time, food, and frequency. Select Save to add the feeding schedule. Any existing schedules that is made can be deleted if it’s no longer needed.

6. Care Tasks

Select Care Tasks to create and manage tasks for a pet. The user would then enter what the task name is, the description, due date, and frequency.

These tasks can also be marked if it’s done or not.

7. Reminders

Selecting the reminders will let users see their reminders in the tab itself and on the main dashboard. Reminders can be connected to care tasks and include a reminder date and status.

8. Saving Information

When users save information in ExoticCare the information will be saved as long as the user adds and saved the information for their pet. Once the data is saved, the user can freely open and close the application with their information staying intact.

9. Closing the Application

Once the user is finished using ExoticCare for the day, they can close the app by clicking the X on the top right-hand corner of the app. The information that was put in while the user was using the app will stay for when the user comes back to check on their status.
